DETAILED ACTION

This Office Action is in response to the amendment filed 10/17/05.

Currently, claims 1-17 and 19-29 and 31-32 are pending.

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 9/30/05 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Specification

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1, and 6-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Nguyen et al. (US 5,904,565, dated 5/18/99).

Application/Control Number: 10/788,991 Page 3

Art Unit: 2812

Nguyen shows the method as claimed in figures 1-20 and corresponding text in a damascene method with substrate 32, a dielectric 36 having a trench 40 filled selectively with metal 48 and barrier 62 which is both conductive and non-conductive (i.e., see column 6, lines 10-16; column 7, lines 40-60).

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later

Application/Control Number: 10/788,991

Art Unit: 2812

invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claims 2-5, 9-17, 19-29 and 31-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nguyen et al. (US 5,904,565, dated 5/18/99).

Nguyen shows the method substantially as claimed, and as shown in the previous paragraphs.

Nguyen lacks anticipation only in not teaching the materials of the dielectric, methods and details of deposition of the metal layer by implantation; formation parameters associated with deposition of the barrier including nitrogen exposure.

It would have been obvious to one of ordinary skill in the art to have taught the materials of the dielectric, methods and details of deposition of the metal layer by implantation; and, formation parameters associated with deposition of the barrier including nitrogen exposure, in the method of Nguyen, with the motivation that these associated parameters and deposition methods are conventional alternatives and produce equivalent quality devices.

Response to Arguments

8. Applicant's arguments filed 10/17/05 have been fully considered but they are not persuasive. In response to Applicant's remarks, regarding Nguyen not showing the nonconductive portion over the dielectric layer, figure 18 shows a substrate 162/164 with a dielectric layer 166 having at least one trench, deposition of metal 188 in the trench and a barrier layer 190 (non-conductive) and 214 (conductive). The Examiner reads the reference with the broadest interpretation, in that Nguyen teaches a selective barrier formation process with options

Art Unit: 2812

of making the barrier conductive or non-conductive to meet the design specifications (column 3, lines 46-60). This interpretation has not been precluded by Applicant's claim language. Ti barrier layers are discussed.

Conclusion

- 9. The prior art made of record in the previous office action, and not relied upon is considered pertinent to applicant's disclosure. See the PTO Form 892.
- 10. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lynne A. Gurley whose telephone number is 571-272-1670. The examiner can normally be reached on M-F 7:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Lebentritt can be reached on 571-272-1873. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
